

# Have you heard of Palivizumab (PVZ) or Nirsevimab?

They are medications that provide **temporary** protection against **respiratory syncytial virus (RSV)**.

**They are approved for use in children 2 years of age and younger.**

They are not used to treat RSV, but rather to **prevent** RSV infection.

**Talk to your healthcare professional to see if PVZ or Nirsevimab is recommended for your child.**
