The National Advisory Committee on Immunization (NACI) recommends immunization with Tdap vaccine for the following:

- all pregnant women, during each pregnancy, irrespective of previous Tdap immunization history and interval between pregnancies.

**Dosage and Schedule**

One dose of Tdap vaccine is 0.5 mL.

1. **All healthy pregnant women during each pregnancy**
   - Administer one dose of Tdap between 27 and 32 weeks gestation.

2. **Pregnant women at high risk for preterm delivery**
   - Administer one dose of Tdap between 13 and 26 weeks gestation.

**Re-Immunization**

If Tdap immunization was provided early in pregnancy, it is not necessary to re-immunize after 13 weeks of gestation.

**Contraindications and Precautions**

Tdap vaccines are contraindicated in persons with a history of anaphylaxis after previous administration of the Tdap vaccine and in persons with proven immediate or anaphylactic hypersensitivity to any component of the vaccine or its container.

**Adverse Reactions**

- Soreness or redness at injection site.
- Occasional slight fever may occur.
- Very rarely, moderate to severe reactions may occur.

**Simultaneous Administration with Other Vaccines**

Tdap vaccines may be administered concomitantly with routine vaccines at different injection sites using separate needles and syringes.
